5a.

1. first
2. was
3. which
4. then
5. at
6. which

7a.

1. that, would, did
2. as
3. that, would
4. did
5. thought, would

7b.

Expectations	Outcomes
--------------	----------

- I thought that the differential stress in all of the samples would go up - I expected that increasing the temperature would reduce - I thought the minerals would all be affected	- It did for olivine and for perovskite - As I expected the perovskite was the strongest - That's what did happen with the olivine
---	--

1. Because these are past expectations and more often we use the word will when it's present, so like is in past the word changes into would.
2. Because the word did emphasizes the fact that his prediction is correct
